

FAT DOG RECIPE

How to Make Your Dog a Diabetic in 7 Days or Less

IMPORTANT: All ingredients listed are fed **raw**. Do not cook anything!

This is **not** a diet to be used on puppies, nor is it intended to be fed as an ongoing regimen. This is for adult dogs which need “emergency” weight gain, e.g., a dog that won’t eat when boarded or when on a show circuit.

1 pound hamburger
1 cup molasses
1 cup white Karo syrup
1 cup wheat germ
1 cup oatmeal
2 eggs

Mix all ingredients together; it should have the consistency of meatloaf. You can patty it out and freeze it if you need to.

Only feed this diet for around 7 days (at most) and then lay off for a couple of weeks. You can also feed it every third day or so, feeding the dog’s normal diet in between, if that suits the situation. It is too sweet to continue day after day for extended periods.
